

Packaging Solutions

Mikart offers a variety of packaging options for your prescription and OTC drug products. From unit dose packaging to bottle filling, our capabilities will help you achieve your commercial and clinical trial objectives.

- ▶ Unit Dose
- ▶ Physician Samples
- ▶ Clinical Trial Materials
- ▶ Thermoformed Blisters
- ▶ Cold-formed Blisters
- ▶ Starter-dose Packs
- ▶ Laminated Foil Pouches
- ▶ Bottles (HDPE, PET, Glass)

Blister Packs

Our state-of-the-art blister packaging equipment manufactures both thermoformed and cold-formed blisters.

Depending on your product packaging requirements, Mikart can supply several cost effective materials including PVC\Foil, PVDC\Foil, Aclar, and Aluminum\Aluminum.

Pouches

Laminated foil pouches provide a convenient and effective option for companies requiring low cost solutions for their physician sampling and unit dose requirements. In addition to cost benefits, pouches are a good choice when you need to maximize the amount of product information printed per package size.

Bottles

We can package both solid dose and non-sterile liquid products on our bottle filling lines. All of our packaging suites have separate air handling and filtration systems to ensure complete quality control during the packaging of your product. Our lines can handle a wide range of container sizes and shapes from small unit dose bottles (15 cc) to large bulk packs (1250 cc).
